INTRODUCTION

The United Nations, through its Committee on the Peaceful Uses of Outer Space, has provided a solid base for space law by the adoption of five space law treaties and four sets of legal principles. This broad legal framework, including the constitutions of regional and international space organizations, other international space law instruments, a host of bilateral agreements relating to space, and an extensive body of commentary by academics, demonstrate that space law had long become a separate branch of international law. As the work of the international community continues, in the increasingly complex field of space regulation, a bibliography would be an invaluable tool for research. Hence, this space law bibliography has been prepared to assist the international community in the areas of space law and policy as it works further, and into the new century.

This bibliography concentrates on the immense contribution made in this field by the International Institute of Space Law of the International Astronautical Federation. The history of the International Institute of Space Law (IISL) goes back to 1957, the year the Space Age began, with the launch of Sputnik I. Four days after this momentous event, the Eighth International Astronautical Federation (IAF) Congress established a special Committee in charge of "defining the respective areas of jurisdiction for air and space law". This Committee proposed that the IAF, at its Congress the following year, include in its programme an international meeting of space law experts. This was the fountainhead of the IISL and its annual colloquia on space law.

The first colloquium was held at The Hague in 1958, with 44 participants from ten countries. The session proposed that a Permanent Legal Committee be set up, within the framework of the IAF, to study problems concerning space law. The IAF Congress adopted this proposal by a resolution. The Second space law Colloquium was held during the Tenth IAF Congress, held in London in 1959. The Colloquium passed a resolution to replace the Permanent Legal Committee by the *International Institute of Space Law*. The Eleventh IAF Congress, held in August 1960, gave its assent to this project. Thus, the IISL came into being. Though a component of the IAF, the Institute is authorized to function autonomously in accordance with its Statutes.

The International Institute of Space Law organizes, on an annual basis, a Colloquium on the Law of Outer Space, to coincide with the annual Congresses of the IAF. These colloquia are held on juridical and social science aspects of space activities, "thereby providing forums for individuals from different legal systems and regions of the world to engage in the free expression and exchange of ideas relevant to space law and policy," pursuant to its Statutes.

The Institute's annual colloquia have made their own unique contribution to the development of space law. The legal papers submitted by its members at its conferences examine and analyse contemporary and future issues relating to human space activities. The IISL plays an important role in rallying distinguished specialists who interpret existing principles and rules of the law of outer space and prepare proposals for States to consider in concluding treaties or accepting other instruments of cooperation or otherwise contribute to the development of the law of outer space. Untrammelled by bounds of diplomatic proprieties, its members have thus more than fulfilled the mandate of the IISL Statutes that it provide a forum for individuals to engage in the free expression and exchange of ideas relevant to space law and policy.

These ideas served as an important and essential complement to the debates in COPUOS and its Legal Subcommittee. The Institute contributed to the space law framework through position papers and statements submitted by its parent body, the IAF which has permanent observer status in COPUOS. Generally, the IISL Colloquia discuss contemporary or future space law issues, thus identifying potential regulatory areas that the Committee may wish to consider. This input is supplemented by legal symposia that the Institute organizes on the occasion of Legal Subcommittee meetings. The symposia, which recently have begun to be held regularly on an annual basis, also serve to bring new space law issues to the forefront of international debate and discussion and provide the members of the Legal Subcommittee to interact with the academic community.

Over the years, the IISL has published the papers presented at its conferences in the Proceedings of the Colloquia on Outer Space. These are published within six months of the conclusion of each session. The Proceedings not only serve as a record of the ideas presented at the Colloquia, but also are a historical trace of the progress and growth of space activities. To facilitate research and make the entire existing unique record of the Institute easily available to members of the Committee on the Peaceful Uses of Outer Space, other international organizations, universities, and the general public, the Board of Directors of the IISL agreed to publish this Space Law Bibliography, in cooperation with the United Nations Office of Outer Space Affairs.

GUIDE TO THE BIBLIOGRAPHY

This bibliography is composed of subject-cum-author indices of the papers published in the IISL Colloquia Proceedings from its first (1958) to thirty-seventh (1994) sessions. The subject index is followed by the author index. The numerical references indicate the session and year of a Colloquium, and the page at which a particular title begins. Thus, for example, in the author index, A.H. Abdel-Ghani's paper on "Special Report on United Nations Institutions Concerned with Space Activities" was presented at the 13th Colloquium in 1970, and is reproduced in the Proceedings of that year, beginning at page 39. Please note that the 5th (1962) and 6th (1963) Colloquia Proceedings were un-numbered.

The texts of articles cited in this bibliography are to be found in the annual *Proceedings of the Colloquium on the Law of Outer Space*, published and distributed for the International Institute of Space Law by the American Institute of Aeronautics and Astronautics (AIAA), 370 L'Enfant Promenade, S.W., Washington, D.C. 20024-2518, U.S.A. The AIAA began publishing the proceedings with the 22nd Colloquium in 1979. The Proceedings from 9th to 21st Colloquium (1966-1978) were published and are being distributed by Fred Rothman & Co. of Colorado, U.S.A. Prior to that, they were published by Springer-Verlag of Vienna, Austria.
